SOLUTION

Supply Chain Cloud, Oracle E-Business Suite, ASCP

ABOUT

LiDestri Foods is a premier private label and proprietary brands contract manufacturer of food, beverages and spirits, supplying over 40 million cases of product each year. They have 6 facilities in 4 states in the United States.

CHALLENGES

Lidestri Foods was tracking all demand management activities on spreadsheets and entering data manually into a Planning System. The process was very manual, cumbersome to manage and had potential to introduce errors. The manual process also meant there were no automated reports in place. Lidestri needed to improve demand management with visualization and sophisticated, automated reporting.

THE CSS APPROACH

With help from CSS, the company compared the Oracle on-premise solution, Demantra, which they owned but had not implemented, to Supply Chain Cloud. That exercise drove the business case to select Oracle's Supply Chain Cloud solution over Demantra. The implementation leverages standard integrations of Supply Chain Planning Cloud with EBS release 12.1.3; and the solution was rolled out to 6 facilities in 4 states.

RESULTS

Their integrated footprint includes Supply Chain Cloud and an on-premise, hosted EBS instance including, EBS-OPM key modules and ASCP, with an implementation plan of less than 6 months. Not only did Lidestri modernize their solution footprint, but they saved on implementation and recurring costs by implementing Supply Chain Cloud, reducing annual support costs and total cost of ownership. The solution also allows them to eliminate spreadsheets and manual entry that have greater potential for error.

“The combination of Supply Chain Cloud and Oracle E-Business Suite will provide a powerful solution that is and will continue to drive savings across our supply chain. With help from CSS, we identified a road map and integration that will vastly improve processes.
