Reporting, AP Imaging

ABOUT

MYR Group is a Top 5 ENR
U.S. Specialty contractor with
segments in commercial and
industrial, transmission &
distribution.

CHALLENGES

MYR Group was running JD Edwards World and felt like it wasn't user-friendly or modern. Green screens, a largely custom project management system, and lack of visibility to easy reporting was causing roadblocks to their productivity, and a sluggish environment.

They also wanted a mobile system that would run efficiently on all devices and be able to leverage a platform for an acquisition strategy.

THE CSS APPROACH

CSS brought an approach that included stakeholders at all levels to establish goals and governance of the project. Our strong construction industry and JDE E1 credentials meant they could leverage CSS' toolkit of industry standard templates, best practices and methodology to analyze the base functionality offered by JDE E1 and analyze the 'gaps' with current system in use. With goals to minimize any rework for new company acquisitions and standardize operating practices across the company, CSS led MYR Group and its steering committee with a focus on project costs and schedule to meet those objectives.

RESULTS

With a new modern ERP platform, and an Organizational Change Management (OCM) plan happening. MYR group accomplished their goals of user adoption, easy access formatting for decision makers and a faster, more efficient solution that would keep pace with an aggressive growth strategy.

Increased velocity of service delivery to the business

Provided a platform with a broader base of support skills and regular software updates

Fully leveraged JDE E1 platform that supported acquisition strategy

Mobile, easy-access format for users and leadership across the organization

CSS really helped us design a long-term vision that supported our goals from a business and technology standpoint.
