Engineering and
Construction

SOLUTION

Managed Services for JD
Edwards

ABOUT

For over a century, Clark Construction Company has been one of the most experienced and respected building and civil construction firms in the U.S. With small beginnings as a local excavator, Clark currently employs over 4,000 in its offices throughout the nation. Their portfolio features projects of all sizes, including some of the country's most complex civil operations.

CHALLENGES

Clark needed to quickly replace two of their long-term, in-house JD Edwards support resources due to retirement. They also required a scalable support model that would improve software usage while meeting their future needs with a move from JD Edwards World Software to EnterpriseOne.

THE CSS APPROACH

CSS Managed Services provided the support Clark Construction needed. CSS provided a flexible model and started small to accommodate spikes in support needs, covered all functional and technical areas, and provided a trusted perspective as Clark evaluated their long-term technology solutions.

CLOUD SOLUTION

Cloud ERP stand-alone. On premise replacement of Oracle E-Business Suite. Financials, Procurement, Project Portfolio Management

RESULTS

By partnering with CSS, Clark was able to save on recruiting and hiring costs by not back-filling their two open positions. And, through Managed Services, they now have access to solutions and industry experts 24/7.

**30% Reduction in JD
Edwards Support
Costs**

**Access to a Team of
Expert Resources**

CSS has truly become an extension of my IT team. Even our accounting and operations business units recognize CSS' consultants as experts in JD Edwards software and the whole engineering & construction industry as well.
